

Conservation - Yes, There is an App for That

1. Open your smartphone's App Store and search for "Ivegot1" - download the app (it's free!)
2. After the download completes, open the app and register your account. This is important to do this *before* you report any species. The home screen will look like the image to the right.
3. Once you have registered, you will be able to start reporting invasive species. Your smartphone will mark your exact location using its Global Position System (GPS).
4. As you travel, be on the look out for invasive species. If you think you see one, use your new app to confirm. You can search alphabetically *or* you can use species categories to sort through photos.
5. If you are sure (or mostly sure) you have spotted an invasive species, use the app to take a picture and record notes. When taking a photo, make sure the invasive species is clear to see. The photo is very important, so take your time getting a good shot.
6. After you take the photo, push the Report button on the bottom tab.
7. Once back at your desktop computer, visit <http://www.eddmaps.org/> to log in and review your entry. Here you may add or change details before your entry officially submitted.
